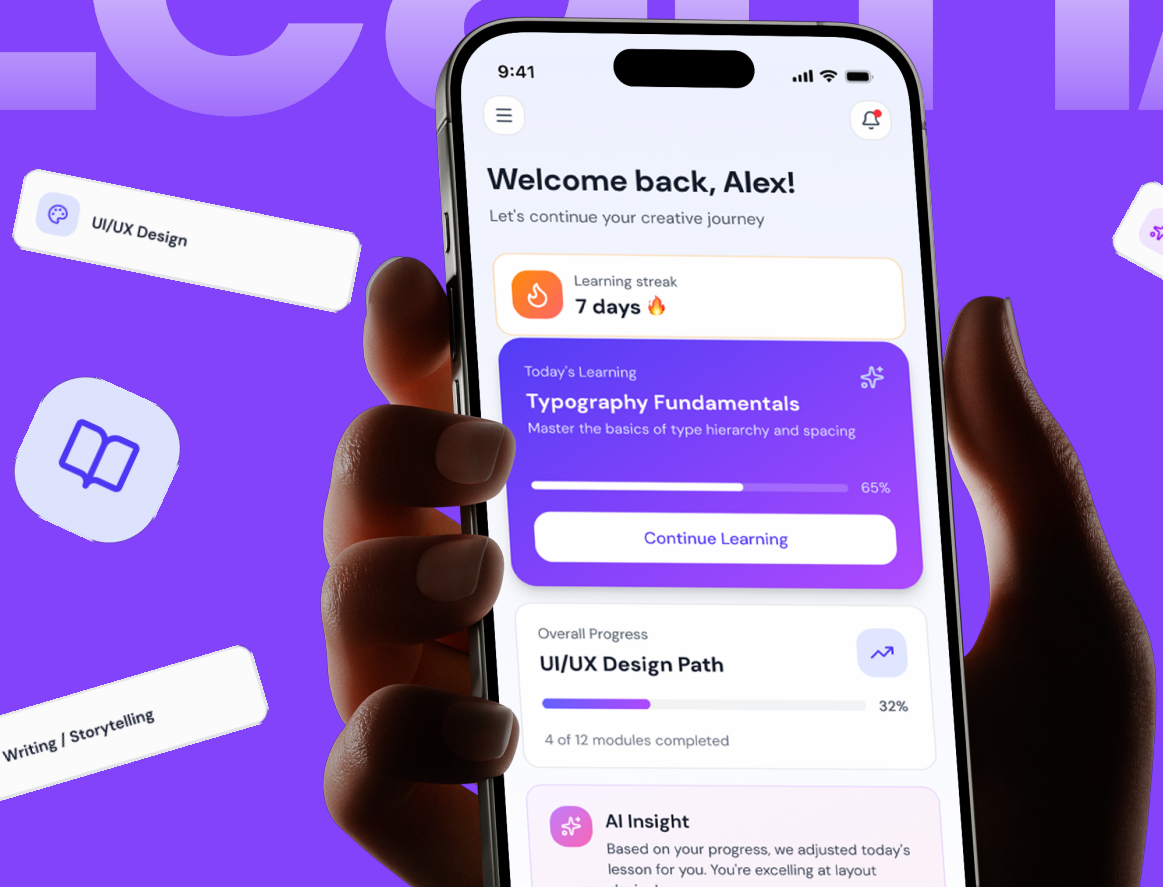
LearnAI



Helps you master skills faster, tracks your growth, and rewards consistency—
turning learning into a habit, not a struggle.

UX research | UI design | Design thinking process

Challenges

Learning new skills is exciting, but it can feel overwhelming without proper guidance. Many learners struggle to stay consistent due to unclear learning paths, lack of personalized support, and difficulty tracking real progress. This often leads to frustration, loss of motivation, and incomplete learning outcomes.

Goal

The goal is to make learning more engaging, structured, and achievable by providing personalized guidance and continuous support. By simplifying the learning journey and offering interactive, progress-driven tools, the platform aims to boost learner confidence, improve consistency, and increase success in mastering new skills.

Industry	Location	Timeline	Semester

Market segmentation

Design & creative students

UCEED had ~15k applicants in 2025 (source for pipeline of aspirants). There are thousands of design seats and many private institutes — the learner base for beginner→intermediate creative skills is s

Early- Career creative professional

active graphic designers and UX listings in India; UX & design jobs remain in demand. (example datasets: ~30k graphic designers listed on some directories). Use these as conservative base-users.

Institutions & training centers

Corporate training market in India is large (~USD 10.8 Bn in 2024 per IMARC) — corporate L&D budgets are an adjacent route for B2B pilots.

Comptetive analysis

Features	Coursera	Udemy	BYJU'S
Course variety	✓ Wide range of academic & professional courses	✓ Massive variety across skills & hobbies	✗ Mostly focused on school curriculum
Instructor interaction	✗ Limited mentor interaction	✗ Mostly no direct support	✓ Personal mentors & counselors
AI & personalization	✓ Uses AI for course recommendations	✗ Limited AI personalization	✓ Strong AI-based adaptive learning
Beginner friendliness	✗ Can feel complex for beginners	✓ Very beginner -friendly	✓ Simple explanations for students
Global presence	✓ Strong global reach	✓ Strong global reach	✗ Mostly India -focused

Primary research

95%

95% have used online platforms at least once to learn design skills. Like courses, Videos, etc.

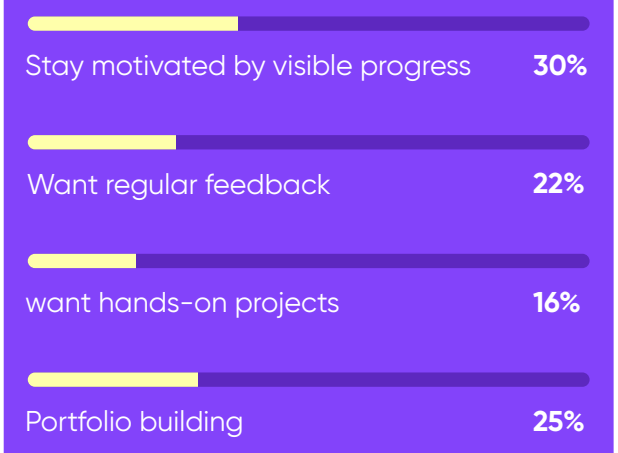
10.8%

Only 10.8% "almost always" finish courses after starting

₹499

Most are willing to pay ₹199–₹499 per month for adaptive learning + personalized feedback

Learners want practical motivation & progress



32%

32.4% – Too much theory, not enough practice is one of the most common dropout reason.

81%

81% think AI-driven personalization is useful (But want control over how AI helps)

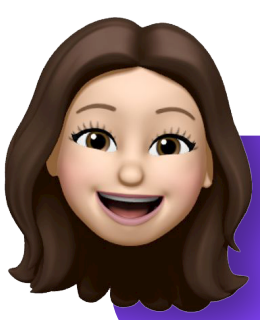
47%

47.6% prefer monthly subscription. It's make them feel like more personalized.

62%

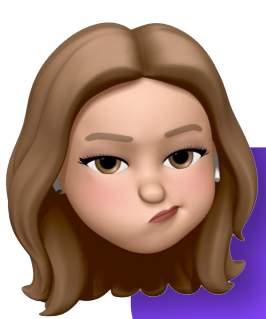
62% receive generic, technical or no feedback on their projects or portfolios.

"I start learning with excitement, but I lose motivation when I don't get any real feedback."



"AI suggestions are helpful, but sometimes I wish a real mentor could tell me what I'm doing wrong."

"If I could clearly see my progress and improve my portfolio, I'd stay consistent."



"I finish lessons, but I'm not confident enough to apply these skills to real projects."

Insights

Most learners are already familiar with online learning, but they often feel disengaged when course content is not personalized to their skill level or creative goals. Poor feedback quality, lack of mentor guidance, and fixed, theory-heavy learning structures lead to frustration, low motivation, and very low course completion rates. Learners struggle to apply what they learn to real projects, resulting in weak portfolios.

Problem statement

Traditional online learning platforms often adopt a one-size-fits-all approach that fails to engage creative learners effectively.Key challenges include:

Lack of personalization in learning pace and content relevance

Limited feedback on creative performance or skill development

Low motivation due to passive and repetitive learning structures

Absence of emotional or behavioral understanding in course progression

User persona

Aarav Mehta, 20/ Mumbai

Aarav is a UI/UX design student who learns most of his skills from YouTube and online courses. He starts many courses but rarely finishes them. He wants feedback on his work, but online platforms either give nothing or just generic comments.

Goals	Needs	Pain point
Build a strong design portfolio	Personalised feedback on his designs	Courses are too theory-heavy and boring
Improve actual creative thinking (not just tools)	More *practical*, project-based learning	No useful feedback, so he doesn't know if he's improving
Learn industry-level projects	Adaptive pacing to match his speed	Gets confused and stuck without guidance
Get recognized for his skills	Visible progress tracking to stay motivated	Repeats content he already knows
		Hard to stay motivated till the end

Isha sharma, 25/ Delhi

Isha works a full-time job but wants to shift into a creative role or freelance. She buys courses sometimes but struggles to finish them due to time constraints and lack of clarity on what to learn next.

Goals	Needs	Pain point
Develop creative skills alongside her job	Flexible learning timeline that adapts to her availability	Too much information, no structured path.Low interaction, feels isolated
Build projects that help her switch careers	Clear guidance on what to learn next	Boring video content leads to drop -off When she's stuck, no one helps
Learn efficiently without wasting time	Short, practical lessons she can apply quickly	Generic content not tailored to her goals
Earn certificates or badges for credibility	Motivation tools like badges, streaks, rewards	

Ideation

Creative skills should be learned with guidance that adapts to the learner — not with fixed, one-size-fits-all courses.

How did this idea come up?

Most online learning platforms: _____

Deliver the same content to everyone
Follow the same pace for all learners
Provide little or no meaningful feedback

This approach fails especially in creative fields like: UI/UX Design

Graphic Design
Storytelling
Because creativity is:

Subjective
Iterative (learn → try → fail → improve)
Highly dependent on motivation and confidence
This led to the ideation of LearnAI.

USP

AI-Driven Personalized Learning Paths
Every learner has a different:
Skill level
Learning speed
Consistency pattern
Area of difficulty

Intelligent Feedback for Creative Work
Instead of just watching videos, learners:
Work on real creative tasks
Upload projects
Improve through iterations

Early Progress That Motivates
Most apps show progress too late, causing users to drop out.
LearnAI shows progress early:
After just 2 lessons
Progress bar updates
Streak starts
Motivational message appears
Next lesson is suggested by AI

Tagline of Learn AI

"Where Creativity Gets Smarter."

- Because it communicates all 4 things in 3 words:
  - Creativity + your domain
  - Smarter → AI + personalized guidance
  - Clear value → "this will improve you, not just teach you"
- It sounds like a tech-creative product, not a boring e-learning site.
